Profile Summary

DevOps Engineer with hands-on experience in CI/CD pipelines, cloud infrastructure, and end-to-end automation. Practical expertise across AWS, Docker, Kubernetes, Ansible, Jenkins, Linux, and DevSecOps tooling. Proven ability to reduce deployment time, eliminate manual processes, and build scalable production-ready infrastructure through IaC and automation-first practices.

Technical Skills

Cloud & OS	AWS, Azure, Linux (Ubuntu, CentOS, Kali), Windows
Containers	Docker, Kubernetes
IaC & Automation	Terraform, Ansible, Bash Scripting
CI/CD & VCS	Jenkins, Git, GitHub, GitLab, Maven
Monitoring	Prometheus, Grafana, CloudWatch, ELK Stack
Security	Trivy, SonarQube
Networking	DNS, VPC/Subnetting, Load Balancing, Firewalls, Nginx
Scripting	Python, Shell Scripting, YAML, C/C++, Java

Experience

Jan 2026 – Present **DevOps Engineer Intern**, TVM IT Solutions, Chh. Sambhajinagar

- Built CI/CD pipelines using Jenkins and Docker to automate build and deployment
- Containerized applications with Docker for consistent environments
- Automated deployment processes, reducing manual effort

Project Experience

Cloud Migration – On-Premise Infrastructure to AWS

Stack: AWS EC2 · S3 · RDS · VPC · ALB · IAM · Route53 · CloudWatch · Ansible · Bash

- Automated server provisioning, OS hardening, and application setup across all EC2 instances using Ansible playbooks and Bash scripts, eliminating all manual configuration.
- Secured infrastructure with IAM least-privilege roles, VPC security groups, and ACM SSL/TLS certificates with Route53 DNS for HTTPS-only access.
- Configured CloudWatch dashboards, metric alarms, and SNS notifications for real-time visibility into CPU, memory, and application health.

CI/CD Pipeline – Automated Build, Test & Deploy

Stack: GitHub · Jenkins · Maven · SonarQube · Trivy · Nexus · Docker · Kubernetes · Gmail SMTP

- Built GitHub webhook → Jenkins pipeline automating full build, test, and deploy on every push with zero manual steps.
- Compiled source and ran unit tests via Maven; published versioned .jar artifacts to Nexus with full audit trail and rollback support.
- Enforced SonarQube quality gates and dual-phase Trivy CVE scanning across filesystem and Docker image to auto-block vulnerable deployments.
- Containerized with Docker, deployed to Kubernetes for production orchestration; configured Gmail SMTP alerts on pipeline success and failure.

AWS CodePipeline – Containerised CI/CD on EKS

Stack: GitHub · CodePipeline · CodeBuild · Docker · ECR · EKS · CodeDeploy · CloudWatch · Terraform

- Architected fully managed AWS-native pipeline - GitHub → CodeBuild → ECR → CodeDeploy → EKS - eliminating all self-hosted build infrastructure.
- Automated Docker image builds with commit SHA tagging and ECR push on every build for complete deployment traceability.
- Configured zero-downtime rolling deployments on EKS with version-controlled manifests; provisioned all infrastructure via Terraform IaC.
- Integrated CloudWatch logs and alarms with SNS for instant visibility into build failures and container health.

Education

Exp. July 2026 **B.Tech in Electronics and Computer Engineering**, Maharashtra Institute of Technology, Chh. Sambhajinagar

2022 **HSC (12th)**, Rajashree Shahu Higher Secondary School, Pathari, 81.14%

2020 **SSC (10th)**, Rajashree Shahu Secondary School, Pathari, 78.40%

Certifications

Nov 2025 **DevOps Basic to Advanced**, Udemy
